

iontoPATCH
Lower risk. Lower cost.
Designed for lifestyle.

Iontopatch empowers patients with a simple, non-invasive alternative to injection that easily integrates into their lifestyle.

Patients choose Iontopatch™ because it is safe, pain free, non-invasive - and does not interfere with day to day activities.

Physicians choose Iontopatch™ because of its outstanding safety profile, proven clinical results and positive economic impact on overall patient care.

PROVEN BY EXPERIENCE

- Over 12 MILLION patches administered
- Supported by peer reviewed outcome studies.
- Excellent safety profile

THE IONTOPATCH

Four products provide different dosage and treatment options based upon each patient's clinical presentation and tolerance. Patients can administer dexamethasone driven by the patented iontophoretic technology without wires or external devices or going to physical therapy.

- Alternative to injection
- Extended time-released electronic transdermal drug delivery medical device
- Self-contained battery to carry drug across the skin and into underlying tissue
- Drug delivery is localized and shuts off automatically when the prescribed dose has been administered
- No charging station or controller required
- Cost-effective and less time-consuming
- Weight bearing

THE IONTOPATCH OF FAMILY PRODUCTS

Iontopatch 80

Longer wear time minimizes risk of skin irritation.

14 hour average patient wear time
